DIRECTIONS FOR USE

Urea Blending: N-TACT TWO may be used to treat urea prior to application in the field—including pre-treatment. Under certain temperature and humidity conditions, urea blended with N-TACT TWO may stick together. Application of urea to the field is recommended soon after treatment for best results.

UAN Solutions: N-TACT TWO may be mixed with liquid fertilizers such as aqua ammonia or other liquid ammoniacal or urea nitrogen fertilizers. Liquid fertilizers containing high levels of phosphate should not be used with N-TACT TWO. If pesticides are added to the tank mix in conjunction with liquid fertilizers, a compatibility jar test should be performed prior to large scale application to the field.

Liquid Manure: N-TACT TWO may be mixed with liquid animal manures. N-TACT TWO may be applied to slurry pit or through an injection system as material is loaded into applicator.
